Securely Connecting People with Information

NDTI provides customers the edge in a cyber-world where adversary actions never stop. As part of our core competencies, NDTI's cyber security workforce delivers the most advanced and integrated solutions across all domains for the military, civilian government and private industry throughout the United States.

Cyber security means more than compliance: it also requires Information Assurance (IA) and Computer Network Defense (CND). NDTI's approach starts with risk assessment to minimize threats to network operations while complying with Federal Information Security Management Act/National Institute of Standards and Technology (FISMA/NIST) and Department of Defense (DoD) Information Assurance

Certification & Accreditation Process/Risk Management Framework (DIACAP/RMF) regulations. As part of a long-term strategy to deliver federal security solutions through threat control and containment, NDTI performs the following services and training for our clients:

- Security Assessment: Enabling more consistent, measurable, and trustworthy evaluations of security controls through Defense Information Systems Agency (DISA) approved tools;
- Risk Assessment: Promoting a better understanding of enterprise-wide mission risks and countermeasures;
- Assessment and Authorization (A&A): Performing system A&A per DIACAP and/or RMF business rules;
- Lifecycle Information Technology/Information Assurance (IT/IA) sustainment: Maintaining security updates and compliance status on Federal information systems;
- Operational Support: of legacy networks, Research Development Test & Evaluation (RDT&E) IT infrastructure, business systems, and platform IT systems;
- Coordinating Information Security with the United States Strategic Command (USSTRATCOM), Defense Intelligence Agency (DIA), National Security Agency (NSA), Department of Homeland Security (DHS), and the United States Air Force.
